

Inkjet Printing Displays: The Disruptive Potential of Solution Processing

Daniel Rogers, Head of Digital Publishing, Smithers Apex

Abstract

Solution processing has the capacity to significantly simplify and reduce the cost of display manufacturing. OLED display suppliers like LG are committed to a solution-processed future for displays. And a future of flexible displays fits well with a future of printable electronics. So what is the current state of solution processing for displays?

Dan Rogers, Head of Digital Publishing at Smithers Apex (publisher of +Plastic Electronics), looks at the technical achievements in solution-processed display manufacturing and the remaining steps to market applications.
